23. Problem: (use additional Sheets if necessary) Have the Data Management department post the updates to the data model technical paper for 5A to the EDHS Internal Server. Under the document posting website for Science Users' community, developers from Landover and the DAACs constituents access this information for references to data model. In addition, send out hard copies to the stipulated individuals referenced on the next page. Lastly, send a cc:mail message to DM indicating the technical paper has been posted and to close the CCR as completed.									
24. Proposed Solution: (use additional sheets if necessary) Post the softcopy of this document to the Science Users' Community Bulletin Board, Release 5 Developers bulletin board, and e-mail a softcopy to the DAACs constituents. This is considered of course a more time consuming approach, which should not be considered unless it is for workaround purposes only.									
25. Alternate Solution: (use additional sheets if necessary) There are no alternate solutions available to this process for updating the 420 Data Model that has been approved for the project.									
26. Consequences if Change(s) are not approved: (use additional sheets if necessary) If the changes are not posted to the website for key personnel to access mentioned above and on the next page then there is a possibility for issues to arise as to whether or not the comprehensive updates of addendums and erratas for 5A Data Model baseline have been posted.
